Tails - Bug #13000

Behaviour of power button in the Greeter is not consistent with the one in the regular GNOME session

06/23/2017 04:08 PM - cypherpunks

Status: Resolved
Priority: Normal
Assignee:
Category:
Target version: Tails_3.0.1
Feature Branch: bugfix/13000-power-button-in-greeter
Type of work: Code
Blueprint:

Description
Pressing the hardware power button when on the Tails greeter screen causes the computer to suspend instead of powering off and wiping the memory clean. Pressing the power button again shows the debian 9 lock screen.
I boot tails from an iso image on a usb flash written with dd.

Pressing the hardware power button when on the Tails greeter screen causes the computer to hibernate instead of powering off and wiping the memory clean.

Indeed, that button should do nothing at all, to be consistent with what we do in the GNOME session in Tails 3.x.

So this:

```
config/chroot_local-includes/etc/dconf/db/local.d/00_Tails_defaults:power-button-action = 'nothing'
```

... should be copied to config/chroot_local-includes/usr/share/gdm/dconf/50-tails.
