Our UX designers maintain, as tickets related to this one, a list of important UX improvements. See the documentation about how these tickets relate to Foundations Team work.

### Top priority tickets (last updated in February 2019)

These tickets were already added to the Foundations Team's plate. Consider working on these first.

- #13438: Parts of Greeter translations are not applied (6)
- #16094: Have simplified and traditional Chinese in the list of languages in Tails Greeter (2)
- #16095: Curate the list of languages in Tails Greeter (3)
- #15169: Keyboard layout is not updated in Administration Password fields in Greeter (2)
- #13447: Inconsistent administration password setting process at Greeter (2)
- #12638: Automatic language → keyboard selection is broken when selecting some languages (3)
- #15168: Improve UX when hardware clock is set to localtime in a timezone too far from UTC (2)

### Good priority tickets (last updated in August 2019)

These tickets are not part of the top ones in terms of value/cost but could nevertheless be turned into Foundations Team work if you are particularly interested in working on them.

- #16093: Remove untranslated Chinese languages from Tails Greeter
- #6084: tails-greeter: localize keyboard layout names
- #8061: Customize error messages in Tor Browser and remove the "Tor is not ready" popup
- #15028: Rename "Tor Browser" shortcuts and folders

### Subtasks:

- Feature # 15887: Analyze the user value of tickets related to #14544
- Feature # 15888: Analyze the development cost of tickets related to #14544
- Feature # 16997: Update the value/cost analysis of tickets related to #14544, 2020 edition

Revision 9235c9a4 - 08/25/2019 07:04 AM - intrigeri

FT: document how we handle UX improvements tickets (refs: #14544)

**History**

**#1 - 08/30/2017 12:35 PM - intrigeri**

- **Description updated**

**#2 - 09/30/2017 11:02 AM - intrigeri**

- **Status changed from Confirmed to In Progress**
- **% Done changed from 0 to 10**

I'll start by dumping some thoughts about this topic in the hope it starts a discussion and helps building a suitable proposal later on.

I'd like this to have a dedicated time budget (both for developers & UX person), not mixed with the existing Foundations Team and UX core work budget lines; otherwise I don't trust us much to prioritize this above the other many things that are in scope for these existing core work roles. I could elaborate if you want but I guess you get the idea.

I'm not sure if we should call this core work initially. I *think* this would be the first time we add improvements (as opposed to maintenance, fixing regressions and keeping relevant) to Core work:

- If we do that, then it opens a much broader discussion, i.e. why not add improvements in other areas such as security too?

This year we were not able to fund all the core work, and some people had to do big parts of it as volunteers. If we add this new role to Core work, we'll need to be extremely careful wrt. how we prioritize paying it vs. paying other (really really needed) jobs. Let's take care of our team dynamics and do whatever we can to avoid frustration, especially when money is involved.

Ideally we would have data to select what actual improvement has the best cost/benefit. Thankfully we have initiated changes (in the Help Desk's mission, in having some budget for UX research) that will help us estimate the benefit; our developers can guesstimate costs.

I think we need a team built of:

- one or two developers who are able to work on most of our code bases (i.e. proficiency in at least Python + shell + OS/desktop integration glue,
and ideally Perl too although that can be delegated in an ad-hoc way); I think that restricts our realistic options to three individuals (I'll go into details privately);

- one UX person.

Alternatively, the UX person could pick whatever developer has time and required skills, depending on the task. But I don't see a good way to make this work in a fluid manner with the cost/benefit approach proposed above. A permanent team has the advantage that it increases the chances the developer is involved in the process of picking the tasks, feels like they own the tasks more, is more motivated & less frustrated, and has a more user-centric approach to the problems at hand.

If I'm one the main developer, then I don't want this to be yet another set of WIP tasks that take months to complete: I don't need this in my mental space. And even if I'm not on board, a more focused approach to this work will save lots of context switches, waiting time between round-trips, and bureaucratic overhead. So I would go for a sprint approach (maybe twice a year?), piggy-backing on other sprints if possible, with the entire team (dev + UX) present face-to-face. This fits well with the smallish aspect, i.e. it forces us to pick a set of tasks that fits in a 2-4 days sprint. And it makes my "time budget" proposal realistic even with team members who don't clock their work usually.

---

- Assignee changed from intrigeri to sajolida

Also, in 2018 we want to work on #11679. I doubt we can do both at the same time, and I'd rather bring #11679 to the point where we know what we want to do exactly and how much it will cost, before we start this other area of UX improvements work => I would start this only in 2018Q4 + 2019Q1. anonym, sajolida, what do you think?

**#5 - 11/14/2017 01:23 PM - sajolida**

- Target version changed from Tails_3.3 to Tails_3.5

**#6 - 01/21/2018 02:07 PM - sajolida**

- Assignee changed from sajolida to intrigeri

Yeap. I'll also be myself quite busy with core + OTF UX work in the first part of 2018. Maybe we should take advantage of the summit to decide on which improvements we want to work on. If so maybe 2018Q3 would be the time to identify candidates before the summit and prepare the coding work if we need to do some prototyping and testing before the actual coding.

So I agree with you, coding could start in 2018Q4 but UX work could start in 2018Q3. Does that answer your question?

**#7 - 01/22/2018 11:11 AM - intrigeri**

- Assignee changed from intrigeri to sajolida

- Target version changed from Tails_3.5 to Tails_3.9
sajolida.

Maybe we should take advantage of the summit to decide on which improvements we want to work on. If so maybe 2018Q3 would be the time to identify candidates before the summit.

Agreed ⇒ setting the target version accordingly. Do you want to lead this process?

and prepare the coding work if we need to do some prototyping and testing before the actual coding.
So I agree with you, coding could start in 2018Q4 but UX work could start in 2018Q3.

I'm not sure that anything that requires enough prototyping and testing done in advance fits well with the "smallish" aspect of what I had in mind. At least to start with I'd rather pick tasks that can fit into a short sprint, all inclusive. But I feel it would be premature to discuss this in details right now, so whatever.

Does that answer your question?

Yes, thank you.

@anonym: your input would be welcome but no pressure (no emergency anymore since this won't make it into our budget for next year, and to be blunt: the fact you did not find time to answer here is already a partial answer).

intrigeri:

I don't think we have the means to recruit, onboard and get up to speed someone else.

Actually we're going to try and onboard 2-3 new people on the Foundations Team. This job could be a good way to help do that :)

#46 - 09/05/2018 04:26 PM - intrigeri
- Target version changed from Tails_3.9 to Tails_3.10.1

#47 - 09/06/2018 08:55 AM - sajolida
- Target version deleted (Tails_3.10.1)

#48 - 09/06/2018 10:46 AM - intrigeri
- Related to Feature #15613: Prepare our 2019Q3 → 2020Q2 budget added

#49 - 09/06/2018 10:47 AM - intrigeri
Next step (after the subtasks) is to include this in our budget next year (#15613).

#50 - 09/10/2018 05:41 PM - sajolida
- Related to Feature #15766: Prevent accidental Tor Browser window maximizing added

#51 - 09/10/2018 05:49 PM - sajolida
- Related to Feature #15768: Use desktop background to warn users when their Tails needs to be updated added

#52 - 10/09/2018 10:31 AM - intrigeri
- Related to Bug #16030: SquashFS errors during boot lead to false-positives on graphics card error reports added

#53 - 10/16/2018 10:47 AM - intrigeri
- Related to Bug #13438: Parts of Greeter translations are not applied added

#54 - 10/21/2018 08:46 PM - sajolida
- Related to Feature #10048: Improve some terminology and phrasing of the Persistence wizard added

#55 - 10/21/2018 08:46 PM - sajolida
- Related to Feature #15109: Rename 'Persistence wizard' as 'Persistence assistant' added

#56 - 10/21/2018 08:46 PM - sajolida
- Related to Feature #15572: Redesign UI for the creation of the persistent storage added

#57 - 11/04/2018 06:55 AM - sajolida
- Related to Bug #11292: Bopomofo input for Chinese is not working added

#58 - 11/04/2018 07:09 AM - sajolida
- Related to Feature #16094: Have simplified and traditional Chinese in the list of languages in Tails Greeter added

#59 - 11/04/2018 07:09 AM - sajolida
- Related to Bug #16093: Remove untranslated Chinese languages from Tails Greeter added
Here's the spreadsheet that we came up with together with intrigeri today. The value and cost estimated are super rough but that's probably good enough to get a first list of candidates.
I put in bold the top 8 of the pile, without taking UX cost into account.

And here are some tickets that the Foundations Team could start looking into right now without having to wait for a lot of UX work (value/cost in parenthesis):

- #13438: Parts of Greeter translations are not applied (6)
- #16094: Have simplified and traditional Chinese in the list of languages in Tails Greeter (2)
- #16095: Curate the list of languages in Tails Greeter (3)
- #15168: Keyboard layout is not updated in Administration Password fields in Greeter (2)
- #13447: Inconsistent administration password setting process at Greeter (2)
- #12638: Automatic language → keyboard selection is broken when selecting some languages (3)
- #15168: Improve UX when hardware clock is set to localtime in a timezone too far from UTC (2)

#76 - 01/24/2019 09:15 AM - intrigeri

And here are some tickets that the Foundations Team could start looking into right now without having to wait for a lot of UX work:

Woohoo, I'm very happy we have this list! Adding to the agenda of the next FT meeting.

#77 - 02/12/2019 06:56 PM - intrigeri

- Related to Bug #16461: Backup persistence.conf before modifying it in t-p-s added

#78 - 03/17/2019 08:39 AM - intrigeri

- Related to Bug #16568: Make writing persistence.conf.bak more robust added

#79 - 03/27/2019 09:29 AM - sajolida

- Related to Bug #16611: Propose users to add relevant internationalization Debian packages added

#80 - 05/03/2019 11:16 AM - sajolida

- Related to Bug #16669: Inconsistent "Encrypted" (vs "Encrypted?") for locked VeraCrypt volumes in GNOME Files added

#81 - 05/06/2019 06:54 PM - sajolida

- Related to deleted (Bug #16260: Notification on MAC spoofing failure is truncated)

#82 - 06/03/2019 07:16 PM - sajolida

- Related to Feature #6502: Add download size and estimated time when downloading upgrades added

#83 - 06/12/2019 09:53 AM - sajolida

- Related to Feature #16796: Display the Tails version number during boot (Boot Loader Menu or Tails Greeter) added
#84 - 07/22/2019 11:21 AM - sajolida
- Related to Feature #15794: No feedback on failure to lock busy volume in "Unlock VeraCrypt Volumes" added

#85 - 07/22/2019 06:22 PM - sajolida
- Related to Feature #16906: Use USB images instead of ISO images in Tails Installer added

#86 - 07/22/2019 06:22 PM - sajolida
- Related to Feature #16907: Rename Tails Installer as Tails Cloner added

#87 - 07/22/2019 06:22 PM - sajolida
- Related to Feature #16905: Speed up the checksum computation in the verification extension added

#88 - 08/07/2019 11:06 AM - sajolida
- Related to Feature #5461: Persistence preset: Tor configuration added
