Enigmail Wizard Setup shows up at every Tails session

06/29/2018 02:56 PM - mercedes508

Status: Resolved
Priority: Elevated
Assignee: %
Category: Persistence
Target version: Tails_3.9
Feature Branch: bugfix/15693-dont-show-enigmail-wizard -every-time
Type of work: Code
Blueprint: 

Start date: 06/29/2018
Due date: 
% Done: 100%
Estimated time: 0.00 hour
Spent time: 0.00 hour
Starter: 
Affected tool: Email Client

Description
Apparently, even if using Thunderbird persistence, Enigmail Wizard Setup shows up at every boot of Tails and launch of Thunderbird.

I guess this is not to expect.

Associated revisions
Revision 45925bdb - 07/01/2018 07:33 AM - intrigeri
Stop deleting Enigmail's persistent configuredVersion (refs: #15693).

Enigmail needs this info to know whether it should display its configuration wizard and trigger other post-upgrade operations. We should let it manage this value itself, otherwise it will display its configuration wizard every time one starts Thunderbird in a freshly booted Tails, even if the Thunderbird data is persistent.

Revision dd5f62ba - 07/01/2018 07:33 AM - intrigeri
Merge branch 'bugfix/15693-dont-show-enigmail-wizard-every-time' into stable (Fix-committed: #15693)

Well, well, I messed up: first I noticed the wizard popping up but failed to let sajolida know this should be documented in the release notes. Then I told sajolida about the workaround (just follow the wizard and accept the default choices) but neither he nor myself checked that the workaround actually worked for the next Tails session :/
OK, so this is caused by some over-enthusiastic changes we made to fix #12680, that have this kind of unintended, over-reaching side effects. Enigmail has logic that seems pretty accurate (package/configure.jsm) to deal with upgrades so IMO we should stop deleting the info it needs to do so, i.e. the real, persisted value of extensions.enigmail.configuredVersion.

(That's a regression introduced in 3.8.)

Here's how I tested it:

1. upgrade account from 3.8
   1. install 3.8 on a USB stick, enable persistence for Thunderbird and GnuPG, reboot, create a key pair, start Thunderbird, go through the account creation and Enigmail wizards
   2. reboot a couple times with persistence enabled and confirm the bug: every time I start Thunderbird I'm shown the Enigmail wizard again
   3. upgrade the USB stick to an ISO build from this branch
   4. reboot
   5. start Thunderbird: the Enigmail wizard is not shown
   6. do the last two steps again, just in case
2. newly created account
   1. install an ISO built from this branch on a USB stick (deleting its persistent volume)
   2. boot, set up persistent volume with Thunderbird and GnuPG features enabled
   3. reboot, enable persistence, start Thunderbird, go through the account creation and Enigmail wizards
   4. reboot, enable persistence, start Thunderbird: the Enigmail wizard is not shown

And every time I wanted to verify that the Enigmail wizard was not shown, I've waited ~2 minutes: under some circumstances Enigmail will delay its display by 1 minute.

- QA Check changed from Ready for QA to Pass

LGTM

#10 - 07/01/2018 07:35 AM - intrigeri
- Status changed from In Progress to 11
- Assignee deleted (intrigeri)
- % Done changed from 50 to 100
- Type of work changed from Research to Code

Thanks! Rebased --onto stable devel (my mistake for having based in ot devel in the first place), removed the "WIP" prefix on the last commit (oversight), merged into stable and devel.

#13 - 07/02/2018 11:38 AM - sajolida

[...] neither he nor myself checked that the workaround actually worked for the next Tails session :/

If I remember well you published the release while I was still testing this :) Maybe it was too big of a change for a point release as several of us would have detected this in an RC.

redmine@labs.riseup.net:

Issue #15693 has been updated by sajolida.
[...] neither he nor myself checked that the workaround actually worked for the next Tails session :/

If I remember well you published the release while I was still testing this ;)

Right, but that does not change the fact that we've documented a workaround that does not fully work, which is the point I was making; and I'm taking my share of responsibility for that. FTR I would not have rebuilt a new ISO to fix that bug anyway, so the timing of testing the workaround vs. releasing is not relevant.

Maybe it was too big of a change for a point release

Maybe. OTOH it was great time to fix (most of) EFAIL and even with this UX regression, I personally don't regret shipping the fix.

as several of us would have detected this in an RC.

Past experience has made me lose lots of faith in our RCs and in the assumption that our contributors use them.

#15 - 07/03/2018 02:24 PM - sajolida

Maybe. OTOH it was great time to fix (most of) EFAIL and even with this UX regression, I personally don't regret shipping the fix.

I find it quite painful to redo all my Enigmail settings everyday.

Yesterday, I tried to skip some of it to go faster and got bitten by Schleuder for not signing my emails. Before 3.8, I was not caring about EFAIL a lot as analyzed on #15602.

But yeah, we don't have to agree on this and the past is the past ;)

Past experience has made me lose lots of faith in our RCs and in the assumption that our contributors use them.
At least I use RCs every time and we could maybe clarify with Help desk and it would be nice if they run them too (I bet some do that already).

I stand corrected in many ways. Thanks!

Good to know!
