Please review and merge the following change for consideration for the upcoming Tails 1.0

git://repo.or.cz/tails/kytv.git bugfix/i2p_incoming

It's a small but important change, setting I2P to disable inbound connections. Inbound connections are already blocked with ferm but this change lets I2P know about it.

Since repo.or.cz is ridiculously slow for me right now, I'm attaching the trivial patch to this ticket.

Thanks :)
